UNIVERSITY OF CAMBRIDGE

Inviting participants for a research study:

Brain, appetite and metabolism

We are looking for adults who experience challenges with weight management to help advance cutting-edge brain imaging research

We would like to invite people aged between 18-65 years to take part in a research study.

What is the research about?

We are investigating how the human brain regulates appetite, metabolism, sleep and behaviour using advanced 7 Tesla MRI scanning.

By taking part, you will help researchers develop new imaging technologies that may improve our understanding of how the brain influences health and metabolic function. Participation involves a non-invasive MRI brain scan, a small number of questionnaires, and simple measurements such as height, weight and waist circumference. Most visits last around one hour.

If you're interested in getting involved, please contact Dr. Stephanie Brown, email: sb2403@medschl.cam.ac.uk
